---

Hi Brenda - Can you go with 21 day turnaround instead of 14? Please answer the following questions: 21 day is sufficient

1)The waters for VOA analysis, will they be preserved (HCL)? Do you need Trace VOA or the low - medium VOA?- The waters will be perserved, low-medium is sufficient

2) The PAHs are targets of concern - do you need SIM analysis for waters/sediments/soils?-We anticipate that SIM will not be neccessary

3) What are the action levels for the PAHs ? Arsenic and Barium?- The HRS uses a 3X BKD rule; the RSSLs are sufficient for action levels

Your prompt response is appreciated.

Take care.

*"The primary concerns at the Delta Shipyard site is the presence of metals and SVOCs including benzo(a)pyrene. The contamination appears to be the result of past industrial practices associated with the Delta Shipyard cleaning and repair activities. Chemical analysis of surface soils collected from the site indicates the presence of 2-methylnaphthalene, naphthalene, phenanthrene, total xylenes, chromium, arsenic and barium in concentrations exceeding three*
